ISBN 978-0-8101-3841-4 (ebook)

PREFACE

This volume is a register of the most important works that have been written, not only on the subject of cryptography, but also on its manifestations in related fields. Hence, the items presented will be seen to vary considerably in nature and content: some are scientific and technical treatises dealing with the application of cryptography to military, diplomatic, and commercial uses; others dwell on the more popular and more limited manifestations of this science, and appear in a variety of disparate forms,—in that of cuneiform, runic, and other kinds of hieroglyphic writings, in literary anagrams and acrostics, in symbolism of colors, gem, emblems, and insignia, in the jargon of children as well as that of thieves, in various types of universal languages and stenographic systems, in tramps' signs and semaphoric signals, and also in the crude devices and ingenious stratagems which were employed during primitive ages as a means of concealing and conveying thought and information.

The material of the volume was gleaned and collected from quite varied sources. For the early fundamental exploratory work of the project, full utilization was made of the facilities offered by the libraries conveniently accessible in the area of Chicago,—Deering Library of Northwestern University, Harper Memorial Library of the University of Chicago, the John Crerar Library, and the Newberry Library. Then a preliminary survey was made in some twenty representative universities in different sections of the country in order to ascertain the extent of the cryptographic material which they contained. As a result of these investigations, valuable clues and indications were disclosed which made necessary for their solution the procurement of microfilm and photostat reproductions of special works contained only in distant institutions. Then thanks to research grants accorded by Northwestern University, two trips of six or seven weeks each were made possible during the summers of 1942 and 1943 to a number of Eastern institutions which the survey showed possessed substantial amounts of the needed material. Although each and all of these depositories contributed a due share of items to our quest, in all justice it should be stated that the most extensive contributions were derived from the Fabyan Collection of the Rare Book Section of the Library of Congress, the Mendelsohn Collection of the University of Pennsylvania, the New York Public Library and the Widener Library of Harvard University.

The number of works consulted and utilized in this quest for cryptographic references and material was quite considerable and, if given in

entirety, would make up an extensive and imposing list. However, it is hoped that an adequate idea of the extent and scope of our researches may be gained if only the most important and essential ones are named. For the purpose of clarification, these may be conveniently grouped into five classifications, as follows: (a) General works of reference; (b) Periodical indices and catalogues; (c) Works of biography; (d) Catalogues of rare books; (e) Special works on cryptography containing bibliographical lists or indications:

(a) *Encyclopedia Americana*; *Encyclopaedia Britannica*; *International Encyclopaedia*; *Catholic Encyclopedia*; *Jewish Encyclopedia*; *La Grande Encyclopédie*; *Encyclopédie ou Dictionnaire Raisonné des Sciences, des Arts et des Métiers*; Brockhaus: *Die Grosse Enzyklopädie*; Boccardo: *Enciclopedia Italiana*; *Enciclopedia Italiana di Scienze, Lettere ed Arti*; Espasa: *Enciclopedia Universal Ilustrada Europeo-Americana*.

(b) *Poole's Index to Periodical Literature*; *Readers' Guide to Periodical Literature*; *International Index to Periodicals*; *Subject Index to Periodicals*; Peddie: *Subject-index of Books*; Watt: *Bibliotheca Britannica*; *International Military Digest, Annual*; *Répertoire Bibliographique des Principales Revues Françaises*; Lorenz: *Catalogue de la Librairie Française*; *Bibliographie der Deutschen Zeitschriftenliteratur*; *Bibliographie der Fremdsprachigen Zeitschriftenliteratur*; *Internationale Bibliographie der Zeitschriftenliteratur*; *Biblioteca della Camera dei Deputati*; *Provveditorato Generale dello Stato*.

(c) *Dictionary of National Biography*; Michaud: *Biographie Universelle Ancienne et Moderne*; *Nouvelle Biographie Générale Depuis les Temps les plus Reculés jusqu'à nos Jours*; *Allgemeine Deutsche Biographie*.

(d) Brunet: *Manuel du Libraire*; Graesse: *Trésor de Livres Rares*; *British Museum: Catalogue of Printed Books*; *Catalogue Générale des Livres Imprimés de la Bibliothèque Nationale*; *Gesamtkatalog der Preussischen Bibliotheken*.

(e) Bailey, J. E.: "Works on cryptography," *Notes and Queries*, Sept. 1, 1877, pp. 169-171. [Contains 40 items on cryptography]; Carmona, J. G.: *Tratado de criptografía*, Madrid, 1894. [Bibliographical list, pp. 173-179]; Dröscher, Ernst: *Die Methoden der Geheimschriften*, Leipzig, 1921. [Bibliographical list, pp. ix-xi]; Figl, Andreas: *Systeme des Chiffrierens*, Graz, 1926. [Contains 90 items on cryptography]; Friedman, W. F.: *Synoptic tables . . . and a bibliography of cipher literature*, Geneva, Ill., 1918. [Bibliographical list, pp. 14-16]; Gioppi, Luigi, di Türkheim: *La crittografia diplomatica, militare et commerciale*, Milano, 1897. [Bibliographical list, pp. 171-174]; Hughes, W. L.: "Works on cryptography," *Notes and Queries*, Oct. 20, 1877. [Contains 40 additions to the Bailey list]; Klüber, Johann Ludwig: *Kryptographik*, Tübingen, 1809. [Bibliographical list of 19 pages];

Lacroix, Paul: *La cryptographie, ou l'Art d'écrire en chiffres*, Paris, 1858. [Bibliographical list, pp. 242-251]; Locard, Edmond: *Les correspondances secrètes*, Lyon, 1936. ["Bibliographie cryptologique," pp. 905-931]; Gylgén, Yves: "Cryptologues italiens du XV^e et XVI^e siècles," *Revue Internationale de Criminalistique*, Lyon, 1932. [Bibliographical list of 16 items]; Lange, André et E.-A. Soudart: *Traité de cryptographie*, Paris, 1925. [Bibliographical list of about 100 items]; Meister, Aloys: *Die Geheimschrift im Dienste der päpstlichen Kurie*, Paderborn, 1906. [Contains bibliographical indications interspersed throughout the work]; Schneickert, Hans: *Die Geheimschriften im Dienste des Geschäfts- und Verkehrslebens*, Leipzig, 1905. [Contains bibliographical indications]; Volts, James D.: *Bibliography of cryptography*, Cincinnati, 1938. [Bibliographical list of 18 pages]; Wagner, F.: "Studien zu einer Lehre von der Geheimschrift," *Archivalische Zeitschrift*, München, 1886-1888, Vol. XI, pp. 156-189; Vol. XII, pp. 1-29; Vol. XIII, pp. 8-44. [Contains bibliographical indications interspersed throughout the studies.]

It was from these and many other sources that was extracted the material which was later organized into the items of this volume. It should be mentioned that in this work of organization, a definite effort was made in every instance to give the title of each work in its entirety, with date and place of publication, name of publisher, number of pages, and re-editions, if any. In a number of cases, as the titles were quite long and descriptive, it was felt that the necessity of adding copious explanatory comments was thereby lessened and in some instances precluded, since the descriptions by themselves permitted the reader to gain an adequate idea of the contents and even the value of the works. But in most cases there were added analytical commentaries,—commentaries which are of eclectic nature since they are in fact syntheses of widely gleaned bits of information contributed by many sources. And finally, in so far as it was possible, the analyses and commentaries were directed in such a manner that they should present mainly information which would be of the greatest value and interest to a cryptologist,—information concerning the technique and history of cryptography and its varied manifestations in the related fields.

The author of this volume wishes to take advantage of this opportunity to express his gratitude and appreciation to the many persons who have contributed to or aided in its growth and final completion: to President Franklyn Bliss Snyder of Northwestern University for his encouragement of the project; to the members of the staff of the Charles Deering Library of Northwestern University for their untiring aid in the procurement of needed material; to the staffs of the Rare Book Room of the Library of Congress and of the University of Pennsylvania for rendering their respective

collections, the Fabian and the Mendelsohn, conveniently accessible, and for providing microfilm and photostat reproductions; to various colleagues at Northwestern University for verifying the orthographic accuracy of portions of the manuscript: Professors Joseph G. Fucilla, Frank X. Spiecker, and Joseph C. Murley; to Major Donald D. Millikin of New York University for his kindness in affording access to his bibliographical notes; to Professor John W. Spargo, Editor of the Northwestern University Studies, for his editorial suggestions and aid. To Colonel William F. Friedman I am especially grateful for his continued encouragement, counsel and general contributions.

Evanston, Illinois
December 7, 1944

J. S. G.

This volume is dedicated to
Lieutenant Colonel William F. Friedman,
Signal Reserve (Retired), Director of Communications Research,
Signal Security Agency, War Department,
as a token of appreciation for the many contributions
he has made to the science of cryptology.

A

A. *Leichtfassliche Anleitung zur Geheim-Schreibekunst oder Anweisung, wie man auf ganz einfache Weise jemandem etwas schriftlich mittheilen kann, das jedem Dritten ganz und gar unverständlich ist. Von *A*.* 5. Aufl. Weissensee [1864]. pp. 7. In-8°.

Aaron, Eugene Murray. "How hieryglyphics have been deciphered." *Goldthwaite's Geographical Magazine*, New York, June 1892, pp. 417-419. [Description of the stone of Rosetta and the obelisk of Philae, with an explanation of the work of Champollion and others in deciphering their inscriptions.]

Acme Code Co. *Acme commodity and phrase code*. San Francisco: Acme Code Co., 1923. pp. 902. In-4°.

——— *Acme supplement; an addenda [sic!] to the Acme Commodity and Phrase Code, covering a modern list of banks, vessels, cities, countries, steamship lines, port tables, private code words.* . . New York, San Francisco, 1932. pp. 112.

Adam, J., and J. C. "Criminal investigation." Madras, 1906. [Mentioned by Hooker in "The Jules Verne Cipher," *The Police Journal*, London, Jan. 1931, Vol. 4, No. 1, pp. 107-119. Contains examples of processes of cipherment. See also Locard, "Bibliographie cryptologique," p. 929.]

Aeneas the Tactician (Aeneas Tacticus, 4th century, B.C.). [According to Polybius, this Greek writer was the author of several treatises on the art of war; of these, the only one in existence deals with the best methods of a defense for a fortified city. In addition, it is valuable for the large number of historical illustrations which it contains. The work was published for the first time by Isaac Casaubon, in his edition of Polybius, Paris, 1609, in-fol. There are several French translations, of which the best known is that of Beausobre: *Commentaires sur la défense des places d'Aeneas le Tacticien* . . ., Amsterdam and Paris, 1757. Ch. XXXI gives information concerning processes of cipherment, besides interesting descriptions of the various stratagems employed in early days to attain secrecy of communication. In commenting on this work, Polybius says that Aeneas: "had collected together twenty different manners of writings, so as not to be understood by any but those in the secret; and that these methods were partly invented by himself and partly in use before his time." For additional information concerning Aeneas the Tactician and his works consult *Nouvelle Biographie Générale*, Vol. 1-2, p. 337, and (under Enée le Tacticien) *Biographie Universelle*, Vol. 12, pp. 459-460. See also Lange et Soudart, *Traité de cryptographie*, III, 17, 212; Locard, "Bibliographie cryptologique," p. 922.]

- Aesop (Greek fabulist, who lived in the 7th century B.C.) [According to La Fontaine: *La vie d'Ésope le phrygien* (édition Jouaust of *Les Fables*, Paris, 1842, pp. 24-25) Aesop was instrumental in revealing a treasure to his master, the philosopher Xantus, by giving him the explanation of a Greek inscription engraved on an old monument. The inscription was made up of the first letters of certain words selected in such a manner that they contained a triple meaning. For additional information concerning Aesop and his works, consult (under Ésope) *Biographie Universelle*, Vol. 13, pp. 41-42, and *Nouvelle Biographie Générale*, Vol. 15-16, pp. 392-394.]
- African, Julius the (Africanus, Sextus Julius, died A.D. 232). [To this Greek historian has generally been attributed the authorship of a work of 24 books, usually known under its French title of *les Cestes*, dealing with agriculture, medicine, physics, and especially military art. The Bibliothèque Nationale, Paris, possesses a manuscript copy of the section dealing with the art of war. It was translated into French by Guischart in Vol. III of his *Mémoires critiques et historiques sur plusieurs points d'antiquités militaires*. Paris, 1774. 4 vol. In-4°. However, according to a number of modern authorities, the work is nothing more than a copy of *Commentaires sur la défense des places d'Aeneas le Tacticien*. For additional information concerning Julius the African and his works consult *Biographie Universelle*, Vol. 1, pp. 211-212, and *Nouvelle Biographie Générale*, Vol. 1-2, pp. 354-355. See also Lange et Soudart, *Traité de cryptographie*, III, 17.]
- Agapeyeff, Alexander d'. *Codes and ciphers*. New York and London: Oxford University Press, 1939. pp. 160. In-8°. (New edition, *ibid*, 1942.) ["History of codes and ciphers from their beginnings through the Middle Ages down to the present. A final chapter gives specific instructions as to methods of deciphering." Bibliographical list, pp. 159-160.]
- Agrippa von Nettesheim, Heinrich Cornelius. *Henrici Corneli Agrippae ab Nettesheym, . . . Opera . . . quibus post omnium editiones de novo accessit Ars notoria . . . Lugduni: per Beringos fratres [1531]*. 2 vol. In-8°. [The Mendelsohn Collection of the University of Pennsylvania possesses a negative photostat copy of Tables II-VIII from Vol. I. For information concerning the author and his works consult: *Allgemeine Deutsche Biographie*, Vol. 1, pp. 156-158; *Biographie Universelle*, Vol. 1, pp. 246-247; *Nouvelle Biographie, Générale*, Vol. 1-2, pp. 422-423.]
- Airenti, F. *Dictionnaire chiffré, diplomatique et commercial*. Paris, 1893. In-16°. [En groupes de 5 chiffres; comprend 59.200 groupes].
- *Versigraphie français (le "Chiffre" en poche)*. 2^e édition. Paris, 1904. In-32°.
- Aktiebolaget Cryptograph. *Cryptograph*. (Damm Brothers). Stockholm: Aktiebolaget Cryptograph, 1922. pp. 21.

Alberti, Leone Battista. *Trattati in cifra*. Roma, c. 1470. [Four manuscript copies of this treatise are known to exist today in the following depositories: Chigi Library, Rome; Vatican Archives, Rome; Vatican Library, Rome; and Archives of Venice, Venice. The Latin original is reproduced *in extenso* in Meister's *Die Geheimschrift im Dienste der päpstlichen Kurie* . . ., pp. 125-141; and information concerning the author and his works is given, pp. 24-29. The treatise deals especially with theories and processes of cipherment, methods of decipherment, and statistical data. William F. Friedman calls it "the oldest tract on cryptography that the world now possesses." For additional information concerning Alberti and his works consult *Biographie Universelle*, Vol. 1, pp. 336-337, and *Nouvelle Biographie Générale*, Vol. 1-2, pp. 617-618. See also Brown, *Calendar of State Papers*; Dröschner, *Die Methoden der Geheimschriften* . . ., IX; Lange et Soudart, *Traité de cryptographie*, III, 19, 20, 212, 213; Locard, "Bibliographie cryptologique," p. 905; Vigenère, *Traité des chiffres* . . ., (1587 edition), p. 209.]

——— *Opusculi morali*. Venezia, 1568. [This work was translated into Italian and edited by Cosimo Bartoli. It contains a chapter, pp. 200-221, dealing with ciphers. See also item on Cosimo Bartoli in this volume.]

——— *Alberti on deciphering*. [Translation by Charles J. Mendelsohn from Meister's *Die Geheimschrift im Dienste der päpstlichen Kurie* . . ., p. 127, line 9 to p. 133, line 21. It is contained in the Mendelsohn Collection of the University of Pennsylvania.]

Alcântara, M. (Capitão). "Cryptotecnica." *Boletim Mensal do Estado Maior do Exército*, June 1916, pp. 407-418. [Description of the organization of a bureau for cipher-writing. It contains a bibliographical list of 8 items. This article has been translated into English for the War College.]

Alciati, Andrea. *Emblemata, cum explicatione per Claudium Minoem. Excerpta ex ejusdem in eadem Alciati emblemata majorum vigiliarum commentariis. Ad calcem Alciati vita nuper ab eodem Minoe conscripta. Lugduni Batavorum, ex officina Plantiniana, apud Franciscum Raphelengium, 1591*. pp. 398. In-16°. [The *Emblems* is a collection of short Latin poems of four, six, eight or twelve verses containing moral reflections. The 1571 edition of the author's complete works contains two different versions of the poems. The work was translated into French by Jean Le Fèvre in 1536, and a new translation was made by Claude Mignault in 1584. For additional biographical and bibliographical information concerning Alciati and his works consult *Biographie Universelle*, Vol. 1, pp. 364-365 and *Nouvelle Biographie Générale*, Vol. 1-2, pp. 696-697.]

Alcocer, Mariano. "Cryptografía española." *Revista de Archivos, Bibliotecas y Museos*, Madrid, 1921, Epoca 3, Tomo 42, pp. 628-640. [Deals with

the codes used by Felipe II of Spain in his correspondence with certain other persons. The key is reproduced on pp. 634-640.]

——— "Cryptografía española." *R. Academia de la Historia, Bol.*, Madrid, 1934, Tomo 105, pp. 337-341. [This article is followed, on pp. 345-460, by 25 cipher alphabets reproduced from Archivo General de Simancas.]

Alexander's Weekly Messenger, Philadelphia. [". . . Between 15 January and 18 April [1840] fifteen articles on ciphers appeared in *Alexander's*, and . . . thirty-six ciphers were published or alluded to. Poe published the text and solution of eleven ciphers; the solution, but not the text, of sixteen. Three ciphers he stated merely that he had solved. Six he had for various reasons failed to solve; one he had lost, one he had had no time to examine, one was written in pencil and "defaced," two were "impositions," and one had fifty-one characters and hence lay outside the limitation which he had prudently set down in his initial challenge." —Wimsatt, "What Poe knew about cryptography," *Publications of the Modern Language Association of America*, New York, Vol. LVIII, Sept. 1943, No. 3, p. 755.]

Apgar, Charles E. "How I cornered Sayville." *Wireless World*, London, Nov. 1915, pp. 518-520.

Appier Hanzelet, Jean. *Recueil de plusieurs Machines militaires, et feux artificiels pour la guerre, & récréation; avec l'Alphabet de Trittemius, par laquelle (sic) chacun qui sçait écrire peut promptement composer congruëment en latin. Aussi le moyen d'écrire la nuit à son amy absent; de la diligence de Jean Appier, dit Hanzelet, chalcographe, et de François Thybouvrel, chirurgien. Au Pont-à-Mousson, par Charles Marchant, 1620. pet. in-4 fig. [Bound with, and immediately following the five parts which make up the Recueil, are the following two parts: Methode pour écrire occultement à son amy par l'alphabet de Trittemius, par laquelle l'on peut écrire & composer congruëment en latin promptement. . . . Recueillie et mise en lumière par la diligence de François Thybouvrel & Jean Appier, dit Hanzelet. Pont-à-Mousson: C. Marchant, 1620.—Methode pour écrire de nuit, à son amy absent, et luy faire concevoir son intention . . . Chose tres-vtile a toutes personnes qui exercent l'art militaire: mise en lumiere, par la diligence & fraix de François Thybouvrel . . . et Jean Appier, dit Hanzelet . . . Av Pont-à-Mousson, par Charles Marchant, imprimeur de son altesse, M.DC.XX. The subjects treated in the five parts are: 1st, means of attack; 2d, means of defense; 3d, models of various war machines; 4th, "feux de guerre"; 5th, "feux de joie." Then follows the Methode pour écrire occultement à son amy par l'alphabet de Trittemius . . . The method consists in the use of torches to which values of a letter have been given: thus for example, A is expressed by a single torch, B by two, C by three, etc. For biographical and bibliographical information concerning Appier Hanzelet and his work consult, under "Hanzelet", Biographie Universelle, Vol. 18, p. 426 and Nouvelle Biographie Générale, Vol. 23-24, pp. 315-317.]*

- Argellati, Filippo. *Bibliotheca scriptorum Mediolanensium, seu acta et elogia virorum omnigena eruditione illustrium, qui in metropoli Insubriae, oppidisque circumjacentibus orti sunt; additis literariis monumentis post eorundem obitum relictis, aut ab aliis memoriae traditis. Praemittitur clarissimi viri Josephi Antonii Saxii . . . Historia literario-typographica Mediolanensis ab anno MCDLXV. ad annum MD. Nunc primum edita; una cum indicibus necessariis locupletissimus. . . . Mediolani, in aedibus Palatinis, 1745. 2 vol. in 4. [Vol. II, col. 2166-2168 contains references to Cichvs Simoneta and a list of his works. Consult *Biographie Universelle*. Vol. 2, pp. 185-186 and *Nouvelle Biographie Générale*, Vol. 3-4, pp. 116-117, for biographical and bibliographical information concerning Argellati and his works.*

Argenti, Matteo. *Trattato che insegna di formare cifre di varie sorti che s'appa[r]tiene a secretarii et a gran signori*. Roma, c.1610. [The manuscript of this work is preserved at Chigi Library, Rome. Meister has given extracts *in extenso* in his *Die Geheimschrift im Dienste der päpstlichen Kurie* . . ., pp. 148-162, and information concerning the author and his work, pp. 61-64, 123. Although this treatise is incomplete, yet it affords valuable information concerning codes and theories of cipherment. See also Dröscher, *Die Methoden der Geheimschriften* . . ., IX, 11, 15, 34; Lange et Soudart, *Traité de cryptographie*, V, 34, 212; Locard, "Bibliographie cryptologique," p. 907.]

——— *Discorso e considerationi et co[n]iecture da levar senza contracifra, et altri particolari cuncti a tal professione*. Roma, c.1610. [The manuscript of this treatise is preserved at Chigi Library, Rome. Meister gives extracts *in extenso* in his *Die Geheimschrift im Dienste der päpstlichen Kurie* . . ., pp. 163-170; 64, 123-124. See also Lange et Soudart, *Traité de cryptographie*, V, 34; Locard, "Bibliographie cryptologique," p. 907.]

——— *Trattato familiare di cifre*. Roma, c. 1610. [The manuscript material of this work is preserved at Chigi Library, Rome. In his *Die Geheimschrift im Dienste der päpstlichen Kurie* . . ., Meister gives extracts *in extenso* (with explanations), pp. 65-113; information concerning the author and his uncle, Giovanni Battista Argenti, pp. 54-60, 124; additional excerpts of the Argenti material, pp. 176-221 (II. Die "cifre vecchie usate" aus der Argenti Sammlung 1539-1566; pp. 283-323 (VII. Chiffrenschlüssel aus Buch II der Sammlung des Matteo Argenti 1555-1593; pp. 323-445 (VIII. Chiffrenschlüssel aus Buch I der Sammlung des Matteo Argenti 1580-1591.

Argenti's work is invaluable for the study of papal ciphers. It deals with theories and processes of cipherment, methods of decipherment, and cipher keys. In summing up the value of Argenti's contributions, Meister says: "Die wichtigste von den Chiffrenarbeiten des Matteo Argenti ist unstreitig sein grosses Chiffrenbuch. Es sollte ein Familienbuch werden, aus dem spätere Mitglieder der Familie Argenti das gesamte Chiffrenwesen der Zeit Gianbattistas und besonders Matteos Argenti erkennen sollten. Das Schicksal wollte es, dass es heute einen grösseren Beruf erfüllen soll, nicht nur für Familienglieder der Argenti, sondern für uns alle ist es die wichtigste Quelle zur Erkenntnis des damaligen, besonders des päpstlichen Chiffrenwesens geworden."—*Op. cit.*, p. 65, ll. 3-10. See also Lange et Soudart, *Traité de cryptographie*, V, 34; Locard, "Bibliographie cryptologique," p. 907.]

A(r)madi, Agostini. *Trattato delle cifre, diviso in otto libri*. Venetia, 1550. [This work is preserved in manuscript form in the Archives of Venice, Venice. It is a very complete treatise on ciphering and deciphering, and also contains considerable information dealing with the history of cryptography. In his *Les Archives de Venise*, p. 577, Note, Baschet says of the work (to which he gives the title: *Trattati varii sullo scrivere*

- in cifra*): "Je ne crois pas qu'il existe nulle part un traité plus complet sur l'art d'écrire en chiffres ainsi qu'une histoire plus développée de cet art. Le second chapitre, composé de soixante-neuf feuillets, est une dissertation sur la science des chiffres pour les correspondances secrètes: c'est une sorte de *grammaire*. Le troisième porte le titre de *Polisteganografia*; le quatrième, *Apogriptografia*; le cinquième traite des *chiffres invisibles*; le sixième expose les chiffres inventés par l'auteur; le septième et le huitième fournissent des exemples et traitent de l'usage et emploi des clefs pour le déchiffrement." For additional information see Lange et Soudart, *Traité de cryptographie*, V, 34; Locard, "Bibliographie cryptologique," p. 906; Meister, *Die Anfänge der modernen diplomatischen Geheimschrift*, pp. 24-25; Meister, "Zur Kenntnis des venetianischen Chiffrenwesens," pp. 329-330; Pasini, *R. Archivio di Venezia*, 1873, p. 328; Wagner, "Studien," Vol. XII, p. 10.]

Beck, Cave. *The universal character, by which all the nations in the world may understand one another's conceptions, reading out of one common writing their own mother tongues. An invention of general use, the practice whereof may be attained in two hours' space, observing the grammatical directions. Which character is so contrived, that it may be spoken as well as written.* By Cave Beck, M.A. London, Printed by T. Maxey, for W. Weekley, 1657. pp. 185. [This work was also published the same year in French. Consult the *Dictionary of National Biography*, Vol. IV, pp. 76-77 for biographical and bibliographical information concerning the author and his works. A good analysis of the system is contained therein.]

Begbie, E. W. *Description of an improved Cryptograph.* London: Civil Service Supply, 1870. pp. 26. In-8°.

Begley, Walter. *Biblia cabalistica; or, The cabalistic Bible, showing how the various numerical cabalas have been curiously applied to the Holy Scriptures, with numerous textual examples ranging from Genesis to the Apocalypse, and collected from books of the greatest rarity, for the most part not in the British Museum or any public library in Great Britain. With introduction, appendix of curios and bibliography, by the Rev. Walter Begley . . .* London. Published by David Nutt at the sign of the Phoenix Long Acre. . . . MDCCCXCIII. vii, 158p.

——— *Biblia anagrammatica, or The anagrammatic Bible: a literary curiosity gathered from unexplored sources and from books of the greatest rarity . . . with a general introduction and a special bibliography.* London: Privately printed for the author, 1904. pp. 212. [This erudite literary curiosity and the *Biblia cabalistica* contain instructive remarks concerning letter-devices and numerous extraordinary specimens of them.]

——— *Breviarium anagrammaticum. The Latin hymns of the breviary, and other famous Latin hymns of the early Church turned into metrical anagrams. Also some of the offices of the Latin Church transmuted into pure anagrams in prose and in verse; together with the lives of many famous saints similarly treated.* [London], 1906.

Beguelin, Nicolas de. "Mémoire sur la découverte des lois d'un chiffre de feu M. le professeur Herrmann proposé comme absolument indéchiffrable." *Mémoires de l'Académie Royale des Sciences et des Belles-Lettres de Berlin*, Berlin, 1758, Vol. XIV, pp. 369-389. [Description of a complicated cipher which is practically unusable. For biographical

information concerning the author consult *Biographie Universelle*, Vol. 3, pp. 507-508. See also Carmona, *Tratado de criptografia*, p. 177; Dröschner, *Die Methoden der Geheimschriften* . . ., X; Klüber, *Kryptographik*, p. 3; Lange et Soudart, *Traité de cryptographie*, VII, 74; Locard, "Bibliographie cryptologique," p. 910; Wagner, "Studien," Vol. XIII, p. 42.]

Belknap, Jeremy. *A discourse intended to commemorate the discovery of America by Christopher Columbus; delivered at the request of the Historical Society in Massachusetts, on the 23d day of October, 1792, being the completion of the third century since that memorable event. To which are added four dissertations, connected with various parts of the discourse . . . By Jeremy Belknap . . . Printed at the Apollo Press, in Boston, by Belknap and Hall, State Street, 1792.* pp. 132. [The copy in Harvard University Library is adapted by manuscript notes to be used in correspondence by cipher.]

Bell, George A. *Bell's phonetic cipher; a system of short-hand, secret communication, written, telegraphic and telephonic, in which numbers, words and sentences are represented by interchangeable words, letters, figures and hieroglyphics, and by particular punctuation.* Columbus, Ohio: Ohio State Journal, 1881. pp. 103.

Bellaso, Giovanni Battista. *Il vero modo di scrivere in cifra con facilità, prestezza, et secretezza, di messer Giovan Battista Bellaso, gentiluomo Bresciano. Con le sue singolarissime qualità & novi precetti, et regole, da esso nella bellissima & importantissima arte di cifrar ritrouate, & in luce poste.* Stampato in Bressa, per Iacobo Britanico, M.D. LXIII. 16 leaves. [The first edition was 1553; corrected editions appeared in 1557 and 1564. A copy of the latter edition was consulted by Meister who gives information concerning Bellaso and an analysis of his work in *Die Geheimschrift im Dienste der päpstlichen Kurie* . . ., pp. 36-37. The treatise stresses especially processes of cipherment. For additional information concerning Bellaso and his works consult *Nouvelle Biographie Générale*, Vol. 5-6, p. 223. See also Lange et Soudart, *Traité de cryptographie*, IV, 25; Locard, "Bibliographie cryptologique," p. 906; Wagner, "Studien," Vol. XII, pp. 11-13.]

——— *La cifra del Sig. Giovan Battista Bel[]aso . . . nuovamente da lui medesimo ridotta a grandissima brevità & perfettione . . . Laqual cifra, benchè sia stampata, contiene in se questa maravigliosa bellezza, che tutto il mōdo potrà usarla & nientedimeno, l'uno non potrà leggere quello che scriue l'altro . . . In Venetia, M D LIII.* 6 leaves. [The Mendelsohn Collection of the University of Pennsylvania possesses a positive photostat of this edition.]

——— *Novi et singolari modi di cifrare.* Brescia, 1555. pp. 8.

Belly, J. de. *Les romans à clef.* Paris, 1849.

Belot, Jean. *L'œuvre des œuvres; ou le plus parfait des sciences steganographiques Paulines, Armadelles et Lullistes, par lesquelles facilement se*

- comprend . . . et l'on cognoist son genie, et par iceluy la perfection de toutes les sciences, que l'on peut acquerir par neuf leçons contenues en ce liure. Paris: N. Bourdin, 1622. pp. 115. In-8°. [In the article on Belot in *Biographie Universelle*, Vol. 3, pp. 602-603, it is stated: "Il dit sérieusement dans ce livre, qu'ayant atteint la perfection dans les sciences divines et humaines, il se croirait coupable de tenir cachés les secrets admirables qu'il avait découverts." Belot published also: *Instructions pour apprendre les sciences de chiromancie et physionomie*. See also Carmona, *Tratado de criptografía*, p. 174; Lange et Soudart, *Traité de cryptographie*, XIII. Mendelsohn makes the following marginal comment concerning the work: "N. Y. Public Library copy is dated 1640. In spite of the title, the book contains nothing on cryptography."]*

Blair, William. A long and elaborate article on "Cipher" in Rees's *Cyclopaedia*, London, 1819, Vol. VIII. [The engraved illustration plates are erroneously inserted under the heading of "Writing by Cypher" in the volume of "Plates," Vol. IV. Plate III has table "Alphabet and key" subscribed: "W Blair inv^t. 1807". On page 28 the author refers to this plate "as an example of . . . writing by dots of his own invention." It is stated in the *Dictionary of National Biography*, Vol. V, p. 168: "This article is incomparably the best treatise in the English language on secret writing and the art of deciphering. It includes a cipher method invented by Blair, which he declared to be inscrutable; but the key was discovered by Michael Gage, who published at Norwich in 1819 (though it is by a typographical error dated 1809)*: "An Extract taken from Dr.

* "My article says Blair first published in 1802, and hence Gage's work could well be 1809."—William F. Friedman.

Rees's *New Cyclopaedia* on the article Cipher, being a real improvement on all the various ciphers which have been made public, and is the first method ever published on a scientific principle. Lately invented by W. Blair, Esq., A.M.; to which is now first added a Full Discovery of the Principle." 8vo. The Mendelsohn Collection of the University of Pennsylvania possesses a negative photostat, 17 leaves, III pl., of article "Cipher" by William Blair, and plates, "Writing by Cypher" (Vol. IV of plates) of Rees's *Cyclopaedia*, London, 1819-1821. Consult the *Dictionary of National Biography*, Vol. V, pp. 168-169 for biographical and bibliographical information concerning Blair and his works. See also Lange et Soudart, *Traité de cryptographie*, VII; and also items in this volume concerning Michael Gage and Abraham Rees.]

- Blanc, Honoré. *Okygraphie ou l'art de fixer, par écrit, tous les sons de la parole avec autant de facilité, de promptitude et de clarté que la bouche les exprime. Nouvelle méthode adaptée à la langue française et applicable à tous les idiomes. Présentant des moyens aussi vastes, aussi sûrs que nouveaux d'entretenir une correspondance secrète dont les signes seront absolument indéchiffrables. Par H. Blanc, sous-chef du Bureau de l'Instruction Publique de la Préfecture de la Seine. Paris, Bidault, an 9 [1801].* lx, 67p. (Seconde édition, Paris, 1808. pp. 67. Troisième édition, Paris, 1819. pp. 71 et 15 pl. In-8°.) [See Klüber, *Kryptographik*, p. 18.]

- Cardano, Girolamo. *Hieronymi Cardani, . . . De subtilitate libri XXI . . . Norimbergæ, apud J. Petreium, 1550*. In-fol. 17ff.-371p. fig. (Other editions: Parisiis, 1550 and 1551, 312 ff.; Lugduni, 1554, 813p.; 1559, 718p.; 1580, 718p.; Basiliae, 1554, 561p.; 1560, 603p.; 1560, 1426p.; 1582, 1148p.; 1611, 1148p.). [This famous work of a noted mathematician, physicist and philosopher contains in Libri XV and XVII a considerable amount of information concerning processes of cipherment; and among many other matters indications for a method of teaching the blind to read and write by the sense of touch. It was translated

into French by Richard Le Blanc under the title: *Les livres de Hierome Cardanus, . . . intitulez De la subtilité, & subtiles inuentions . . . Paris, 1556*; and portions of it into English by Myrtle Marguerite Cass: *The First Book of Jerome Cardano De Subtilitate*. Williamsport: Bayard Press, 1934. pp. 191. In-8°. The *De subtilitate libri XXI*, with its supplement, *De rerum varietate libri XVII*, is fully analysed in Vol. II of Rixner and Siber's *Leben und Lehrmeinungen berühmter Physiker am Ende des XVI. und um Anfange des XVII. Jahrhunderts, herausgegeben von Thaddä Anselm Rixner . . . und Thaddä Siber, . . . II. Heft Hieronymus Cardanus . . . Sulzbach: J. E. Seidel, 1820. xii, 244p.* In-8°. For additional information concerning Cardano and his works consult *Biographie Universelle*, Vol. 6, pp. 660-662 and *Nouvelle Biographie Générale*, Vol. 7-8, pp. 686-695 which contain excellent and detailed analyses. See also Carmona, *Tratado de cryptografia*, pp. 9, 37-41, 173; Lange et Soudart, *Traité de cryptographie*, V, 22, 25, 26, 41; Locard, "Bibliographie cryptologique," p. 922; Nicéron, *Mémoires*, Vol. 14; Pratt, *Secret and urgent*, pp. 92-97.]

——— *Hieronymi Cardani, . . . De rerum varietate libri XVII. Basiliae, per H. Petri, 1557. pp. 707. In-fol.* (Other editions: Avinione, 1558, 883p; Lugduni, 1580, 883p., Basiliae, 1581, 1171p.). [Carmona also gives Lyon, 1580, but adds in a note (p. 173), as he did with *De subtilitate*, that, "Estas obras debieron ser escritas sobre el año 1554 por más que no hemos podido ver la primera edición." Consult Lib. 12, Ch. 61, p. 589 *et seq.* The Mendelsohn Collection of the University of Pennsylvania possesses a negative photostat of "Occultatio," pp. 234-238 of *De rerum varietate*, XII, 61, Vol. III of Cardano, *Opera omnia*, Leyden, 1663, and 1 leaf of manuscript notes laid in.]

Carlet, Jean-Robert du. *La cryptographie, contenant vne tres-subtile manière d'escrire secretement. Composée par maistre Iean Robert du Carlet . . . Ars ipsi secreta magistro. Tolose, par Arnaud Gaissat, & Raymond Avrelhe, 1644. pp. 234. In-12°* [Gioppi gives Paris as the place of publication. An Italian version appeared under the title: *Biagio di Vigenère, la criptografia racchiudente la maniera di scrivere secretamente. Toulouse, 1644*. Authorities such as Locard, Meister, Wagner *et al.*, indicate this version as a translation of Vigenère's *Traicté des chiffres*, 1586, but according to Mendelsohn: "This book has no relation to Vigenère: it is a method of secret writing in the manner of Trithemius's *Polygraphia*." See also Carmona, *Tratado de criptografia*, p. 175; Dröschner, *Die Methoden der Geheimschriften . . .*, IX; Lange et Soudart, *Traité de cryptographie*, V, VI, 30, 47; Locard, "Bibliographie cryptologique," p. 908; Wagner, "Studien," Vol. XII, p. 28.]

Court de Gébelin, Antoine. *Le monde primitif, analysé et comparé avec le monde moderne . . . par M. Court de Gébelin*. Paris: l'auteur, 1773-1782. 9 vol. In-4°. fig. et pl. [Consult Vol. II: *Monde primitif considéré dans l'histoire naturelle de la parole, ou Grammaire universelle et comparative*. "Court de Gébelin s'occupa de vastes recherches sur l'antiquité et sur l'ensemble des connaissances humaines, des mythologies et des civilisations. Après vingt ans de travaux, il commença l'exposé de ses idées et de son système dans un ouvrage intitulé: *le Monde primitif, analysé et comparé avec le monde moderne*, dont il parut 9 vol. de 1775 à 1784, et qui resta inachevé . . . L'auteur fit lui-même un résumé des tomes II et III sous le titre de: *Histoire naturelle de la parole ou Précis*

de la langue et de la grammaire universelles, Paris, 1776, in-8°. Il admettait, disent MM. Haag, l'existence d'une langue unique, fondée sur des principes immuables découlant de l'organisation même de l'homme, et dont les divers dialectes n'étaient que des modifications accidentelles. Il espérait donc retrouver les éléments de cette langue mère en remontant d'idiome en idiome. Dans cette langue primitive, selon lui, les voyelles représentaient les sensations, les consonnes les idées, et l'écriture en fut purement hiéroglyphique. Une fois en possession de ces hiéroglyphes, il croyait arriver facilement à dévoiler les mystères de l'ancien monde, à le faire connaître dans sa mythologie, son calendrier, son culte, son histoire."—Larousse: *Grand Dictionnaire Universel*, Vol. 5, pp. 386-387. D

Dalgarno, George. *Ars signorum, vulgo character universalis et lingua philosophica. Qa (sic) poterunt, homines diversissimorum idiomatum, spatio duorum septimanarum, omnia animi sua sensa (in rebus familiaribus) non minus intelligibiliter, sive scribendo, sive loquendo, mutuo communicare, quam linguis propriis vernaculis.* Londini, excudebat J. Hayes, sumptibus auctoris, 1661. vi-127p. pet. in-8°. [Carmona, Lacroix and Lange et Soudart give 1667 as the date of publication. This work deals especially with codes, and according to some authorities is based closely upon John Wilkin's *Mercury, or the Secret and Swift Messenger*, London, 1641; on the other hand a number of other authorities state that in his *Ars signorum*, Dalgarno was the precursor of Bishop Wilkins in his speculation concerning *A Real Character and a Philosophical Language*, 1668. Consult: the *Dictionary of National Biography*, Vol. XIII, pp. 389-390; *Biographie Universelle*, Vol. 10, pp. 42-43; *Nouvelle Biographie Générale*, Vol. 11-12, pp. 809-810 for biographical and bibliographical information concerning the author and his works. The first reference contains a complete explanation of Dalgarno's general contributions besides summaries of the *Ars signorum* and the *Didascalocophus*. See also Brunet, *Manuel du Libraire*, 5th ed., under article "Dalgarno," Vol. 2, p. 472; Carmona, *Tratado de criptografía*, p. 175; Lange et Soudart, *Traité de cryptographie*, XIII; Locard, "Bibliographie cryptologique," p. 923; *Edinburgh Review*, July 1835, No. 124, Vol. LXI, p. 407-417.]

——— *Didascalocophus or the Deaf and Dumb man's Tutor. To which is added a Discourse of the Nature and Number of Double Consonants: Both which Tracts being the first (for what the Author knows) that have been published upon either of the Subjects. Printed at the Theater in Oxford. Anno Domini 1680.* In-8°. [This work and the *Ars signorum* have been reproduced in *The Works of George Dalgarno of Aberdeen. Reprinted by the Maitland Club.* (Collected and edited by Thomas Maitland.) Edinburgh, 1834. pp. 179. In-4°.]

- Friderici, Johannes Balthasar. *Cryptographia, oder Geheime schrift- mund- und wirkliche Correspondenz, welche lehrmässig vorstellt eine hochschätzbare Kunst, verborgene Schriften zu machen und aufzulösen, in sich begreifend viel fremde und verwunderungswürdige Arten, wie man durch Versetzung der Buchstaben, item durch allerhand Characters,*

Ziffern, Noten, Punkte, mathematische und andere Figuren, Neb- und Stickwerk, Kräuter- und Blumenbüsche, Schildereien, Spielkarten, Fabnen, Feuer und Fackeln, Glocken und andere Stimmarten, selbst erdichtete Sprachen, verblümete Discourse, Augenwinken, unverdächtige Briefe, die etwas andere ausdrücklich als heimlich melden; auch sonsten durch gewisse zubereitete Säfte, und viel andere Dinge mehr, nahe und ferne, bei Tage und in der Nacht, seine Meinung gewissen Personen ganz verborgener Weise kann zu verstehen geben, entdecket von Johannes Balthasar Friderici Lipsiens. Hamburg, Gedruckt bei Georg Rebenlein in Verlegung des Autoris Anno 1685. pp. 280. In-4° [There appears to be considerable diversity of opinion concerning the date and place of publication of this work: Carmona gives both Amsterdam, 1680, and Hamburg, 1684; Gioppi, Kerckhoffs, and Riverbank list give Leipzig, 1685; Bailey indicates Hamburg, 1684; Klüber merely gives the date as 1684; and the Mendelsohn Collection of the University of Pennsylvania and the Fabyan Collection of the Library of Congress each has a copy indicating Hamburg, Georg Rebenlein, 1684 and 1685. Another edition appeared at Hamburg, 1735. pp. 280. In-4°. Friderici's work is especially important for its lists of the various processes of cipherment and information concerning the art of deciphering. "Ouvrage curieux et plus complet que tout ce qui avait été publié jusqu'alors sur les écritures secrètes. Quoiqu'il y ait encore quelques rêveries tirées des alphabets cabalistiques de Trithème, on y voit des procédés ingénieux et peu connus; mais la plupart de ceux qu'il indique sont trop compliqués. Il donne ensuite les vrais principes de l'art de déchiffrer, mais d'une manière trop peu développée. Breithaupt est le premier qui les ait donnés avec un détail satisfaisant, dans son *Ars deciffratoria*.—*Biographie Universelle*, Vol. 15, p. 190. "The material contained in this pamphlet forms the basis of a course in military codes and ciphers given at the Signal School, Camp Alfred Vail, N. J., by Capt. W. F. Friedman" . . . —cf. p. v. It may be said that this is the first *official* publication on cryptanalysis of the U. S. Government and the first book in any language to employ the word *cryptanalysis*, which was coined by Capt. Friedman sometime in 1921 or 1922. It is important because it is the first book in any language which brought some semblance of order in a chaos of confusion in terminology, organization of systems, etc. Its classification of methods and its terminology are still the standard in modern practice. It is the first book which included an analytical key for the classification and solution of cryptograms. It is also the first book which includes methods and procedures for the solution of cryptograms in code as distinct from cipher. In short, it is the first scientifically-organized, *practically-useful* book on cryptanalysis in any language.]

being used to represent words as described by Friderici, and suggests how they can be used in more modern days.]

Jeremiah. [Certain authorities cite the use of the word "Sheshash" in Jeremiah 25:26 and 51:41 as proof of the utilization of ciphers by the early Hebrews. According to their interpretation these are examples of the use of the device, *Atbash*, whereby the last letter of the Hebrew alphabet is substituted for the first, the second-last for the second, etc., so that the word *Babel* is written cryptically *Sheshash*. However, this interpretation has not failed of opposition among other authorities. For extended information on this and similar Biblical ciphers see article "Shashash" by J. A. Selbie in Hastings's *A Dictionary of the Bible*, Charles Scribner's Sons, 1902, Vol. 4, pp. 492-493; Dr. Payne Smith's article in Cassell's *Bible Educator*, Vol. 2, p. 76; Canon G. Rawlinson's article "Sheshach" in Dr. William Smith's *Dictionary of the Bible*, Houghton, Mifflin & Co., Boston, 1888, Vol. 4, p. 2991; a review in *Guardian*, Dec. 29, 1880, p. 1836; Joseph Halévy, *Mélanges d'Épigraphie et d'Archéologie Sémitiques*, Paris, 1874, p. 245.]

Polygraphia nova et universalis ex combinatoria arte detecta quâ quivis etiam linguarum quantumvis imperitus triplici methodo prima, vera & reali, sine vlla latentis arcani suspicione, manifestè; secunda, per technologiam, quandam artificiosè dispositam; tertia, per steganographiam impenetrabili scribendi genere adornatam, vnius vernaculæ linguae subsidio, omnibus populis*

& linguis clam, apertè; obscurè, & dilucidè scribere & respondere posse docetur, & demonstratur. In III. syntagmata distributa in principum gratiam ac recreationem inuenta & in lucem edita. Felicibus auspicijs Leopoldi I. Rom. Imperat. semper Augusti. Romæ, ex typographia Varesij. MDCLXIII Superiorum permissu. Appendix apologetica ad Polygraphiam nouam in qua cryptologia trithemiana discutitur, & arcana paradoxa à trithemio proposita, ad veritatem examinata, partim approbantur, partim tanquam superstitiosa confutantur. pp. 148, 23. (Another edition appeared at Amsterdam, 1680. In-fol.). [The majority of authorities consider this work, which stresses processes of cipherment and codes, to be based more or less upon that of Trithem. Lange and Soudart detect an additional influence,—that of Vigenère. According to them Kircher "a transformé Vigenère en remplaçant les alphabets littéraux par des alphabets numériques . . . Inventeur d'un cryptographe: l'Arca glottotactica . . . Le système du Père Kircher est aujourd'hui abandonné." The work is summarised as follows in *Biographie Universelle*, Vol. 21, p. 645; "Cet ouvrage, fort curieux, est divisé en trois essais: le premier offre une pasigraphie, ou écriture universelle, que chacun peut lire dans sa langue. Le principe d'où il part est un dictionnaire numéroté, tel que Becher l'avait proposé sans l'exécuter. Kircher l'exécute en petit sur cinq langues (le latin, l'italien, le français, l'espagnol et l'allemand). Son vocabulaire a environ seize cents mots; les formes variables des noms et des verbes sont exprimées par des signes de convention. Le second essai donne une stéganographie plus ingénieuse que celle de Trithem; et le troisième, une boîte ou bureau stéganographique, pour écrire ou lire très-promptement un chiffre indéchiffrable." For additional information concerning Kircher and his works consult: *Allgemeine Deutsche Biographie*, Vol. 16, pp. 1-4; *Biographie Universelle*, Vol. 21, pp. 642-646; *Nouvelle Biographie Générale*, Vol. 27-28, pp. 769-776. London: Printed for Edmund Parker, 1721. pp. 39.* [Metcalf's stenographic system appears to be based very closely on the lines of Thomas Shelton's *Tachygraphy*. The first edition of his work was entitled *Radio-Stenography or Short Writing* and was probably published in 1635. It is known that a sixth edition appeared in London in 1645. This was followed in 1649 by *A Schoolmaster to Radio-Stenography, explaining all the Rules of the*

said Art, by way of Dialogue betwixt Master and Scholler, fitted to the weakest capacities that are desirous to learne this art. Many editions of the system appeared under the title of *Short Writing: the most easie, exact, lineall, and speedy Method that hath ever yet been obtained or taught by any in this kingdome.* Consult the *Dictionary of National Biography*, Vol. XXXVII, p. 307 for biographical and bibliographical information concerning Metcalfe and his works.]

Méthode facile pour déchiffrer un écrit quelconque composé en caractères conventionnels dans les langues italienne, française, anglaise, et latine. Florence: V. Batelli et fils, 1833. pp. 98.

Métral, Denyse. *Blaise de Vigenère, archéologue et critique d'art (1523-1596).* Paris: Droz, 1939. pp. viii, 324; 8 pll. [Reviewed by Pierre d'Espezel, *Humanisme et Renaissance*, Vol. VI, pp. 393-396.]

Military cryptography. [Notebook, in the Fabyan Collection, Library of Congress, consisting of 40 typewritten pages giving an excellent summary of cryptography with examples of various systems, followed by printed sheets containing the following articles: "A transposition cipher," by 1st Lieutenant Frederick F. Black, 11th Infantry, pp. 2; "A rapid enciphering and deciphering disk," by 1st Lieutenant Vernon W. Boller, 2d Infantry, pp. 2; "Information for ships desiring to forward radiograms through U. S. Naval radio stations," pp. 13-32; "A proposed amendment to the War Department telegraph code for use in the field," by Captain Alvin C. Voris, Signal Corps, pp. 13-21; "Comments on Captain Voris' paper," by 1st Lieutenant Karl Truesdell, 15th Infantry, pp. 23-26; "Alphabetic frequencies of several modern languages," by 1st Lieutenant Karl Truesdell, 15th Infantry, pp. 5; "Military cryptography, (A study of transposition cipher systems and substitution frequency tables)" by Captain M. Muirhead, Royal Field Artillery, 10 sheets; "Military cryptography" (continued). Further remarks" . . . presented by 1st Lieutenant Karl Truesdell, Signal Corps, pp. 15-16; "Mechanical enciphering and deciphering," by 1st Lieutenant Frederick F. Black, 11th Infantry, pp. 23-32; "An advanced problem in cryptography and its solution," by 1st Lieutenant J. O. Mauborgne, 24th Infantry, pp. 3-19; "A simple transposition cipher," by Captain Parker Hitt, Signal Corps, pp. 12-13.]

Military Signalling. U. S. Infantry Association, Washington, D. C., 1920. pp. 128. [A manual of visual signalling: arm signals; whistle signals; wig-wag signalling; two-arm semaphore signalling; projector and heliograph; explanation of use of codes and ciphers; Ch. X, pp. 98-108: "Ciphers."]

Mille, James de. *The cryptogram. A novel.* New York: Harper & Bros., 1871. pp. 261. [Ciphers play an important rôle in this novel: Ch. VII, pp. 26-29, "The secret cipher"; Ch. VIII, pp. 29-32, "Deciphering."]

Millikin, Donald D. *Cipher writing.* 1937. pp. 4. ["Reprinted by special

permission from *The Encyclopedia Americana*, New York, 1937, pp. 688-690."}]

Porta, Ioan. Baptista. *De furtivis literarum notis, vulgo de ziferis Libri IIII*. Ioan. Baptista Porta Neapolitano Autore. Cum Privilegio. Neapoli, Apud Ioa. Mariam Scotum. MDLXIII. pp. 228. In-4°. (Other editions: Londini, 1591, in-4°; Montisbeligardi, 1593, in 8°; Neapoli, 1602,

in-fol; Estrasburgo, 1602; Argentorati, 1603, 1606. Dröschner gives 1616, n.p.) [This celebrated work is of encyclopedic nature. Book I deals with the cryptographic knowledge of the ancients; Book II gives 180 examples of the ciphers of his period; Book III is a treatise on deciphering. (Argenti states in his own treatise that he drew generously upon Porta's work.); Book IV contains very useful tables of various combinations of syllables and words. The importance and value of the contributions of this mathematician of Naples, inventor of the *camera obscura*, have been commented upon by many of the most noted workers in the field of cryptography: "Fondateur, avec Vigenère, de la cryptographie moderne. A perfectionné les systèmes de substitution simple et inventé la substitution double." — Lange et Soudart; "Le premier traité de cryptographie où il soit question de principes de déchiffrement est dû à Porta." — Kerckhoffs; "Portas Buch hat eine grosse Verbreitung und wiederholte Auflagen erlebt, ja sogar auch unberechtigter Nachdruck, ein offenkundiges Plagiat ist an ihm verübt worden, so sehr wurde es begehrt. Daraus ist der Einfluss Portas auf die Entwicklung der Kryptographie zu ermessen." — Meister. For additional information concerning Porta and his works consult: *Biographie Universelle*, Vol. 34, pp. 124-126; *Nouvelle Biographie Générale*, Vol. 39-40, pp. 842-843. Ramsay, Charles Aloysius. *Tacheographie; ou, L'art d'écrire aussi vite qu'on parle. Renfermé sous très-peu de preceptes; le tout enseigné par une methode briefve & fort intelligible, expliquée par plusieurs exemples. Par le sieur Charles Al. Ramsay . . . Mis en lumiere pour l'usage des theologiens, jurisconsultes, gens qui font profession des lettres, medecins, estudians & de tous ceux qui font des recueils de sermons, & autres pieces d'éloquence. Traduit depuis peu de latin en françois par le sieur A.D.G. Paris, Se vend chez l'auteur, 1681. pp. 146. In-12°. [There is considerable controversy concerning the date of publication of the Latin original. Fossé indicates 1665, Scott de Martinville, 1666, whereas several other authorities state that it was published anonymously in 1678. However, it is the second earliest French work on shorthand, that of Abbé Jacques Cossard, *Methode pour écrire avssi vite qu'on parle . . .*, 1651, being the first. Furthermore, it seems quite probable that Ramsay first learned Thomas Shelton's Latin *Tachygraphia*, 1660, and after slightly modifying the system, put it forth as his own. The*

- following Latin edition appeared in 1681: *C. A. Ramsaij. Tacheographia, seu ars breviter et compendiose scribendi methodo brevissimo tradita, ac paucissimis regulis comprehensa. Francof. et Lipsiae, 1681. In-8°.* The earliest German translation of the Latin original appeared in 1679: *C. A. Ramsaij. Neu vermehrte Tacheographia, oder geschwinde Schreib-Kunst . . . auff's neuwe durchgesehen . . . Leipzig, 1679. In-8°.* A German translation from the English appeared in 1743: *Engelländers Carl Albert Ramsay Tacheographia, oder: Geschwind-schreibekunst, vermittelst welcher ein jedweder die teutsche sprache durch gewisse zeichen, oder verkürzte buchstaben, so fertig zu schreiben, als selbige mag geredet werden . . . Aus den englischen ins teutsche übersetzt. Leipzig, C. F. Gessner, 1743.* The above 1681 French version was reprinted at Paris in 1688, and under the new title: *Nouvelle méthode, ou l'art d'écrire . . . in-12°*, in 1690 and 1692. Ramsay's work contains an appendix on cryptography, in which are stressed processes of cipherment and methods of deciphering. In speaking of this work Klüber says in his *Kryptographik*, pp. 11-12: "Ob dieser Anhang auch bei folgenden Ausgaben befindlich sey, ist mir unbekannt: *C. A. Ramsay, Tacheographia*, Jenae, 1681, 1684. 8. Paris, 1683. 12. *C. A. Ramsay, Tacheographie*. Leipz. 1743. 8. Mit fig. Auch eine französische Übersetzung erschien zu Paris, 1683. 12. mit Kupf. Ebend. 1692. 12. mit Kupf." For additional information concerning Ramsay and his works consult *Biographie Universelle*, Vol. 35, p. 158 and *Dictionary of National Biography*, Vol. XLVII, p. 239.]

lus, continens sententias nobiliores: alter opulentissimus, penè omnia complectens. Francofurti, apud Andreæ Wecheli heredes Claudium Marnium, & Ionn. Aubrium, 1592. pp. 1220. (Other editions: Basileae, 1560; Lutetiae, 1557; Francofurti, 1576, 1612, 1665; Hanoviae, 1634.). [This philosophical treatise on Cardano's *De subtilitate libri XXI* . . ., is the work which best makes known Scaliger as a philosopher. It was a popular text-book until the final fall of Aristotle's physics. Consult *Biographie Universelle*, Vol. 38, pp. 194-196 for additional information concerning Scaliger and his works. The Mendelsohn Collection of the University of Pennsylvania possesses a negative photostat of pp. 1053-1055: "Quaedam de subtilioribus artibus, magia, notoria, alchymia, ziferis," of the 1592 edition.]

Schaube, Adolf. "Zur Entstehungsgeschichte der ständigen Diplomatie." *Mitteilungen des Instituts für Oesterreichische Geschichtsforschung*, Wien, 1889, Vol. X. [Contains details of historical interest. See also Dröscher, *Die Methoden der Geheimschriften* . . ., 23; Locard, "Bibliographie cryptologique," p. 928.]

Schenkel, Lambert Thomas. *Detectus: seu memoria artificialis hactenus occultata. Lyon, 1617. pp. 178. In-12°.* [Schenkel's earlier work, *De memoria libri duo. Douai, 1593. 28 f., in-8°*, was translated into French anonymously at Douai the same year. Editions were printed at Strassburg under the title: *Gazophylacius artis memoriae vel fundamenta artificialis memoriae*, and later in 1629 at Rostock, Venice and Lyons, and in 1678 at Frankfurt. It should be noted also that Schwenter mentions an edition of the work appearing at Augsburg in 1614, under the title: *Exemplum speciminis artis memoriae*. One of these early editions was enlarged by the addition of five short treatises by contributors of whom one was John Willis. This work was further enlarged by the addition of Trithemius's alphabet and other material, and then translated into French by Adrian de Cuirot under the title: *Le magazin des sciences, ou vray art de memoire decouvert par Schenkelius* . . ., Paris, 1623. pp. 359. In-12°. It is reported that one of Schenkel's friends, Jean Paëpp Galbaicus, undertook to make this work more readily understandable and clearer to the readers and published it in a new form as: *Schenkelius detectus* . . . Lyon, 1627 (most authorities give 1617), pp. 178. In-12°, and *Crisis Jani Phaosphori in quo Schenkelius illustratur, ibid*, 1629. pp. 76. In-12°. In 1804, under the patronage of Klüber, a German version was prepared by his disciple Martin Sommer: *Compendium der Mnemonik oder Erinnerungswissenschaft aus dem Anfange des 17. Jahrhunderts, von Lamprecht Schenkel und Martin Sommer. Aus dem Lateinischen mit Vorrede und Anmerkungen von Dr. Joh. Ludw. Klüber. Erlangen, 1804.* [Consult *Biographie Universelle*, Vol. 38, pp. 283-284 and *Nouvelle Biographie Générale*, Vol. 43-44, pp. 506-507 for information concerning Schenkel and his works. - Shelton, Thomas. *Tachygraphy. The most exact and compendious methode of short and swift writing that hath ever yet beene published by any. Composed by Thomas Shelton author and professor of the said art*

*aprooved by both universities . . . London, Printed for Samuel Cartwright and are to be sould at the Hand and Bible in Duck-lane. 1641. pp. 30. (Other editions: 1642, 1645, 1647, 1659, 1660. In addition, Klüber, in his *Kryptographik*, p. 14, gives 1655 and 1666.) [An adaptation of the system of the *Tachygraphy* to the Latin language appeared under the title, *Tachygraphia, sive exactissima et compendiosissima breviter scribendi methodus*, London, 1660. 16mo. It was this adaptation which Gaspar Schott described in his *Technica Curiosa*, Nuremberg, 1665, and which C. A. Ramsay modified slightly to be used in his *Tacheographia*, London, 1681. W. W. R. Ball states that "A somewhat similar system by W. Cartwright was issued by J. Rich under the title: *Semographie*, London, 1644." It is worthy of note that it was in this system that Pepys wrote his celebrated *Diary* and not, as frequently stated, in the system erroneously attributed to Jeremiah Rich [Cf. J. E. Bailey, "On the cipher of Pepys's *Diary*," Manchester, 1876.] For additional biographical and bibliographical information concerning Shelton and his works consult the *Dictionary of National Biography*, Vol. LII, pp. 45-46. This article contains a detailed description of his systems. See also W. J. Carlton: "Thomas Shelton's "Tachygraphy." A bibliographical note." *Notes and Queries*, London, Vol. 165, pp. 326-327; Pratt, *Secret and urgent*, pp. 150-153.]*

——— *A tutor to Tachygraphy, or Short-vvriting, wherein the rules of the said art are severally explained by way of questions and answers . . . whereunto are added, diverse new rules and directions never published till now, for the further perfecting of such as have already learned. By Thomas Shelton . . . London, Printed to bee sold at the authors house, 1642. pp. 52. [A facsimile reprint of one of the issues of 1642 was made by R. McCaskie, London, 1889.]*

——— *Zeiglographia, or a New Art of Short Writing never before published, more easie, exact, short, and speedie than any heretofore. Invented and composed by Thomas Shelton, being his last thirty years study. London, 1649. (Other editions: 1650, 1654, 1672, 1685.) [This is Shelton's second system of stenography and in fact an entirely original one.]*

- Simonetta, Sizzo. *Regulae ad extrahendum litteras zifferatas sine exemplo.* Milano, 1474. [This is probably the oldest treatise on deciphering that exists. Its 13 rules are reproduced *in extenso* in Meister, *Die Anfänge der modernen diplomatischen Geheimschrift*, pp. 61-63. A critical study was made of it by M. Perret in his: "Les règles de Sizzo Simonetta pour le déchiffrement des écritures secrètes (4 juillet 1474)", *Bibliothèque de l'Ecole des Chartes*, Paris, 1890, Vol. 51, pp. 516-525. It stresses methods of decipherment and affords considerable statistical data. In speaking of this work, which he dates 1465, J. W. Thompson says: "The date of Simonetta's little essay on ciphers is important, for it was the period when cryptography became the universal practice, when simple ciphers developed into complicated cryptograms." William F. Friedman calls it the "oldest known work in the whole field of cryptology, which includes both cryptography and cryptanalysis." Consult *Biographie Universelle*, Vol. 39, p. 386 and *Nouvelle Biographie Générale*, Vol. 43-44, pp. 20-21 for additional information concerning Simonetta and his works. See also Dröscher, *Die Methoden der Geheimschriften* . . ., IX; Lange et Soudart, *Traité de cryptographie*, III, 20; Locard, "Bibliographie cryptologique," p. 905; Meister, *Die Anfänge der modernen diplomatischen Geheimschrift*, p. 27.]

It is bound with: *Dechiffriren der französischen Schriften.*]
- Trithemius, Joannis. *Steganographia: hoc est: Ars per occultam scripturam animi sui voluntatem absentibus aperiendi certa; autore reverendissimo et clarissimo viro, Joanne Trithemio . . . Præfixa est huic operi sua Clavis, seu vera introductio ab ipso autore concinnata; hactenus quidem a multis multum desiderata, sed a paucissimis visa: nunc vero in gratiam secretioris philosophiæ studiosorum publici iuris facta . . . Francofurti: ex officina typographica Matthiæ Beckeri, sumptibus Ioannis Berneri, 1606.* 4 pl., 180, 70. 7 p. In-4°. [There is considerable disagreement concerning the early editions of this work. Meister states in his *Die Geheimschrift im Dienste der päpstlichen Kurie . . .*, p. 38, ll. 8-12, that Trithemius had planned this work to consist of four books; that he finished the first,

March 27, 1500, the second, April 20 of the same year, "Dann war er bekanntlich in den Verdacht der Zauberei geraten, und so hatte er die Arbeit mit dem dritten Buche abgebrochen, das keinen Termin des Abschlusses mehr angibt . . .". The earliest date of publication is indicated by David Clément (*Bibl. cur.*, p. 94), who mentions the existence of two very rare volumes, in-8°, which appeared in 1531, in Lyon. This date is likewise given by Carmona, Larousse: *Grand Dictionnaire Universel, La Grande Encyclopédie*, etc. The *Encyclopaedia Britannica* mentions an edition, Lyon, 1551, but later refers to the 1606 edition; Carmona refers to an edition, London, 1603. Furthermore, a certain amount of confusion exists in some of the lists because of their failure to differentiate between the editions of the *Polygraphia* and those of the *Steganographia*; in fact, it is stated in some that the *Polygraphia* was reprinted under the title of *Steganographia*. For example, *La Grande Encyclopédie* indicates the following editions for the two works: 1518, 1531, 1550, 1564, 1571, 1600, 1606, 1613, etc. However, the editions generally indicated for the *Steganographia* are those of the 17th century: Frankfort, 1606, 1608; Darmstadt, 1606, 1621; Cologne, 1631, 1635. In addition, Todd cites an edition, Nuremberg, 1721. (It should be noted that copies of several of the early editions of the *Steganographia* are accessible in American libraries: 1606 Frankfort edition, in New York Public Library and University of Michigan Library; 1606 Darmstadt edition, in University of Chicago Library; 1608 Frankfort edition, in New York Public Library and Yale University Library; 1621 Darmstadt edition, in Cornell University Library; 1721 Nuremberg edition, in Johns Hopkins Library. The Library of Congress possesses the following editions: 1606 Darmstadt; 1606 Frankfort; 1621 Darmstadt; 1635 Cologne; 1721 Nuremberg.)

Book I contains a list of 31 kinds of ciphers, Book II, 24, while Book III is devoted to other matters. Tritheim suggests various ways in which secrecy may be attained, as for example, by making the first and last words meaningless, or in other cases by using the first, third, fifth, etc., or the second, fourth, etc. The remaining words result in a composition which will contain the desired concealed message.

The strange and bizarre terms and characters which Tritheim interspersed throughout the composition of the work soon caused him to be suspected of dealing in the black art. It is recorded that Charles de Bouelles came to this conclusion while examining the manuscript of the work, and that shortly afterwards he succeeded in influencing Frederick II, known as the Wise, to deliver over to the flames a copy which his library contained. This suspicion continued all during the course of the 16th century, as is evidenced by the many allusions to it in the writings of that period. However, a number of more judiciously-minded readers of the work now came to the belief that Tritheim had done nothing more serious than to use the conventionalised language of the magicians

in, as Meister aptly terms it, a spirit of *kindische Spielerei*, and they therefore undertook to vindicate the author of the charges. Among the more noted of these apologists of Trithem are: Sigmund Dullinger, abbot of the monastery of Seon, in his *Trithemius sui ipsius vindex . . . Ingolstadii*, 1616; Gustavus Selenus, in his *Cryptomenytices . . . Lunæburgi*, 1624; Jean Caramuel, in his *Steganographiæ . . . Colonia Agrippinæ*, 1635; Wolfgang Ernest Heidel, in his *Steganographiæ Trithemianæ vindicatio et illustratio . . . Norimbergæ*, 1721; Daniel Georg Morhof, in his *Polyhistor . . . Lubicæ*, 1688, etc.

For additional information concerning the life and works of Trithem consult: *Allgemeine Deutsche Biographie*, Vol. 38, pp. 626-630; *Nouvelle Biographie Générale*, Vol. 45-46, pp. 644-647; *Biographie Universelle*, Vol. 42, pp. 178-183; Isidoro Silbernagel, *Johannes Trithemius, eine Monographie*; W. Schneegans, *Abt Johannes Trithemius und Kloster Spanheim*. See also Carmona, *Tratado de criptografía*, pp. 8, 58, 59, 60, 61 *et passim*, 173; Lange et Soudart, *Traité de cryptographie*, IV, 21, 24, 25, 71, 290-291; Locard, "Bibliographie cryptologique," p. 907; Meister, *Die Geheimschrift im Dienste der päpstlichen Kurie . . .*, pp. 38-39; Pratt, *Secret and urgent*, pp. 43, 61-62, 121; Wagner, "Studien," Vol. XI, pp. 160-170.]

——— *Polygraphiæ libri sex, Ioannis Trithemii abbatis Peapolitani, quondam Spanheimensis, ad Maximilianvm Caesarem. Impressum aere ac impensis integerrimi bibliopolæ Joannis Haselbergi de Aia Constantiensis dioecesis, anno MDXVIII Mense Iulio.* 300 leaves. petit in-folio. (Other editions: Frankfort, 1550; Cologne, 1564, 1571, 1671, 1676, 1721; Argentorati, 1613; Strassbourg, 1600, 1613, 1621, 1637. Copies of several of the early editions of the *Polygraphia* are accessible in American libraries: 1550 Frankfort edition, in New York Public Library; 1564 Cologne edition, in Newberry Library, University of Chicago Library, and University of Michigan Library; 1600 Argentorati edition, in Yale University Library; 1613 Argentorati edition, in New York Public Library. The Library of Congress possesses the following editions: 1518 Oppenheim; 1550 Frankfort; 1564 Cologne; 1571 Cologne; 1600 Argentorati.) There is considerable disagreement concerning the date of the first edition: Bailey, in the *Encyclopaedia Britannica*, and Klüber, in his *Kryptographik*, p. 15, give 1500; Gioppi indicates Paris, 1508; Kerckhoffs gives 1508 "d'après la préface"; and Meister states in his *Die Geheimschrift im Dienste der päpstlichen Kurie . . .*, p. 38, that Trithem had ceased his cryptographic studies on the *Steganographia* after being accused of dealing in magic, but "Nach einigen Jahren war er wieder auf seine kryptographischen Studien zurückgekommen und hatte im Jahre 1508 seine *Polygraphia* zum Abschluss gebracht . . ." But in view of the suspicion and charges which the composition of his earlier volume, the *Steganographia*, had occasioned, it is readily understandable that the author must have exerted every care and effort to

prevent any semblance of cabalistic tinge from creeping into the pages of his new work.

Book I of the *Polygraphia* consists of 382 alphabets of 24 Latin words each, corresponding to each of the letters of the alphabet, and Book II contains 306 similar alphabets. As the words composing each alphabet have approximately the same meaning: (1st alphabet) *Deus, creator, conditor*, etc.; (2d alphabet) *clemens, pius*, etc., by taking the appropriate one from each alphabet, a person could form a phrase or a sentence which would not arouse any suspicion in transmission. To obtain the secret meaning from the message, all the correspondent had to do was to take down the letters corresponding to each word used. For example, the phrase *conditor clemens discernens mundana* would be deciphered as the word *cave* (*conditor* being *c* of the 1st alphabet; *clemens*, *a* of the 2d alphabet; *discernens*, *v* of the 3d alphabet; and *mundana*, *e* of the 4th alphabet).^{*} Book III contains 132 alphabets of words invented in such a way that a message written by means of them would give an uninitiated person the impression that it was in a foreign language. Book IV contains 118 alphabets of variously-invented words. Book V contains a number of alphabets, and deals with methods of enciphering by means of the transposition of letters. Book VI contains several alphabets of allegedly ancient writing characters which Tritheim offered as material for anyone who wished to create his own secret alphabet.

This celebrated work was translated into French by Gabriel de Collange under the title: *Polygraphie et universelle écriture cabalistique de M. I. TritHEME abbé. Paris, 1561*. In 1620, Dominique de Hottinga, a Frisian, perpetrated one of the world's most famous plagiarisms, by publishing Collange's work, likewise in French, but under his own name, and in addition with a preface in which he had the audacity to state how arduous the task of composing the work had been,—and he did not make any mention whatsoever of Collange or even of Tritheim.

It should be noted also that Tritheim was not only the first author to have written a comprehensive dissertation on cryptography, the *Polygraphia*, a work which became the basis upon which many later writers have worked, but in addition he possessed such a good knowledge of Tyronian notes that Dom Tassin and Dom Toustain, the authors of the *Nouveau Traité de Diplomatie* (T. 2, p. 126, and T. 3, p. 150) felt called upon to attribute to him the honor of having been the first to have published and to have interpreted some of these notes. For additional information concerning Tritheim and his works consult the list given under the *Steganographia* item, and in addition Klüber, *Kryptographik*, p. 15; Lange et Soudart, *Traité de cryptographie*, IV,

^{*} "I haven't tried this myself but one of my associates, a Latin scholar, tried to compose a message of practical importance by this method and reported dismal failure!"

Eugène Valdruche, ancien directeur d'Établissements hospitaliers, 128, avenue d'Orléans, Paris. [Handwritten manuscript in 2 parts (31 pp. and 19 pp.) in the Fabyan Collection, Library of Congress, Washington, D. C.]
- Valeriano Bolzani, Giovanni Piero. *Joannis Pierii Valeriani Bellunensis Hieroglyphica, sive de sacris Aegyptiorum, aliarumque gentium litteris, commentariorum libri LVIII. duobus aliis ab eruditissimo viro [C. A. Curio] annexis. Acceserunt loco auctarii Hieroglyphicorum collectanea, ex veteris et recentioribus auctoribus descripta, et in sex libros ordine alphabetico digesta. Horapollinis item Hieroglyphicorum libri duo, ex postrema Davidis Haeschelii correctione. Praeterea ejusdem Pierii Declamatiuncula pro barbis sacerdotum: De infelicitate litteratorum libri duo; denique Antiquitatum Bellunensium sermones quatuor. Editio ad novissimas Germaniae composita, quibus et annotationes ad marginem atque necessarios indices debet.* Francofurti ad Moenum, sumptibus Christiani Kirchneri, 1678. pp. 740. In-4°. (Other editions: Basel, 1556, 1567, 1575; Colonia Agripp., 1631; Florence, 1556; Frankfurt, 1614, 1678; Lugdini, 1579, 1602, 1610; Venice, 1604.) [The first part of this study, the *Hieroglyphica*, appeared first at Basel, in 1556. According to the article in *Biographie Universelle*, Vol. 42, pp. 463-464: "L'auteur s'efforce d'expliquer par les symboles égyptiens, grecs et romains, presque toutes les branches de la science et de l'art; mais on a trouvé qu'il a déployé en cela plus d'érudition et d'imagination que de jugement." It was translated into French as: *Les hieroglyphiques de Ian-Pierre Valerian vulgairement nommé Pierius. Autrement commentaires des lettres et figures sacrées des AEgyptiens & autres nations . . . En cinquante huit liures, auxquels sont adjoincts deux autres de Caelivs Curio, touchant ce qui est signifié par les diuerses effigies, et pourtraicts des dieux, et des hommes. Nouvellement donnez aux François, par I. de Montlyart . . . Lyon, 1615.* An earlier French translation was made by Gabriel Chappuys, Lyons: Barth. Honorat, 1576, in-fol., and an Italian

one was published in Venice: Combi, 1625, in-fol. For additional information concerning Valeriano and his works consult *Biographie Universelle*, Vol. 42, pp. 463-464 and *Nouvelle Biographie Générale*, Vol. 45-46, pp. 869-870.]

Valério, Paul Louis Eugène (Capitaine). *De la cryptographie; essai sur les méthodes de déchiffrement*. (1^{re} partie, Paris, 1893; 2^e partie, Paris, 1896). Paris: Librairie Militaire de L. Baudouin, 1893-1896. 2 vol. en 1. pp. 228. [Part 1 was published also during 1892-1894 in *Journal des Sciences Militaires*, Paris; Part 2, "Étude sur les procédés de déchiffrement des dictionnaires et des tables," likewise in the same journal in 1895, Vol. 57, p. 124 *et seq.*; Vol. 58, p. 127 *et seq.*, p. 285 *et seq.* Part 2 contains also "Déchiffrement de la correspondance de Henri IV et du Landgrave de Hesse," pp. 95-107. Valério bases his principles for deciphering upon the phonetic laws of languages. Hence, he devoted 150 pages or more to a study of frequencies of bigrams and trigrams of the main European languages, and a classification of the sounds occurring in those languages. His book stresses statistical data, methods of deciphering, processes of cipherment, and gives considerable information concerning codes. It is a very interesting work. See also Lange et Soudart, *Traité de cryptographie*, IX, 5, 32, 49, 64, 77, 107, 202, 216-217; Locard, "Bibliographie cryptologique," p. 915.]

Vernam, G. S. "Cipher printing telegraph systems for secret wire and radio telegraphic communications." *American Institute of Electrical Engineers Journal*, New York, Feb. 1926, Vol. 45, pp. 109-115. [This is the earliest printed description of what is now known as the "Vernam principle" in printing telegraph ciphers.]

Verne, Jules. [There are three examples of the use of cryptograms in the works of this popular French author: in *Mathias Sandorf* (Paris: Hetzel, 1885), one which belongs to the grille method; in *La Jangada* (Paris: Hetzel), one which is of the double-key substitution type; in *Voyage au Centre de la Terre* (Paris: Hetzel), one of a transposition type. These are reproduced in the Appendix of Lange et Soudart's *Traité de cryptographie*. See also W. F. Friedman, "Jules Verne as cryptographer," *Signal Corps Bulletin*, Apr.-June 1940, pp. 70-107; Charles W. R. Hooker, "The Jules Verne cipher," *The Police Journal*, London, Jan. 1931, Vol. 4, No. 1, pp. 107-119; Lange et Soudart, *Op. cit.*, pp. 72, 311 et seq.]

Vesin de Romanini, Charles François. *Traité d'obscurigraphie, ou art de déchiffrer ou traduire avec la plus grande facilité, et sans en avoir aucune connaissance, toutes les écritures en caractères, allemands, anglais, arabes, arméniens, gothiques, grecs, hébraïques, maçonniques, etc., quelqu'en soit l'alphabet, et celles mêmes qui seraient faites par les signes que l'esprit le plus extravagant pourrait inventer*. Paris: Madame Gouillet, 1838. pp. 110. [This work was reprinted at Brussels, 1840, under the title: *La Cryptographie dévoilée . . .* See also Lange et Soudart, *Traité de cryptographie*, VII, 3, 62, 107; Locard, "Bibliographie cryptologique," p. 912; Wagner, "Studien," Vol. XIII, pp. 39-40.]

——— *La Cryptographie dévoilée, ou Art de traduire ou de déchiffrer toutes les écritures en quelques caractères et en quelques langues que ce soit, quoique l'on ne connaisse ni ces caractères ni ces langues; appliqué aux langues française, allemande, anglaise, latine, italienne, flamande et hollandaise; suivi d'un précis analytique des langues écrites, au moyen duquel on peut les traduire, sans en avoir aucune connaissance préalable*. Bruxelles: Deprez-Parent, 1840. 1 vol. pp. 331. In-8°. (A new edition appeared in Paris, 1857.) [The work contains considerable informa-

tion concerning methods of deciphering, processes of cipherment, and statistical data. Carmona reproduces in Appendix, Número 13, p. 203 of his *Tratado de criptografía*, the tables of letter frequencies taken from page 274 of Vesin de Romanini's work. See also Carmona, *Tratado de criptografía*, p. 178; Lange et Soudart, *Traité de cryptographie*, VII, 22, 41, 107; Locard, "Bibliographie cryptologique," p. 912.]

——— *Résumé de la Cryptographie dévoilée, ou L'art de traduire ou déchiffrer toutes les écritures en quelques caractères et en quelques langues que ce soit, quoique l'on ne connaisse ni ces caractères ni ces langues, appliqué aux langues française, allemande, anglaise, latine et italienne. . . .* Florence: aux frais de l'auteur, 1844. In-8°.

——— *Compendio della crittografia svelata; ossia, L'arte di tradurre o deciferare ogni scrittura in qualunque siasi carattere, ed in qualsivoglia lingua, senza avere nessuna previa conoscenza, nè di questa, nè di quello, applicata alle lingue italiana, francese, tedesca, inglese e latina; seguita d'un ristretto analitico delle lingue scritte col mezzo del quale si può ottenere la perfetta intelligenza delle medesime senza conoscerle . . . dal professore C. F. Vesin . . .* Firenze: A spese dell'autore, 1844. pp. 227. [Gioppi mentions the existence of another Italian edition: Firenze, 1858.]

Veslot, Henri. *Code Interprète Veslot. Code économique auto-traducteur de correspondance universelle, en français, anglais, allemand, espagnol, italien, permettant de rédiger dans sa propre langue les messages (télégrammes ou lettres) que le destinataire lira instantanément dans la sienne.* Édition française, in-8°. 1912, Larousse. Édition allemande, 2 vol. Édition espagnole, 2 vol. Édition italienne, 2 vol.

Viaris, Gaëtan Henri Léon (Marquis de). *Cryptographie. (Etude publiée dans le journal "Le Génie Civil," mai-juin, Nos. 2-7, Paris, 1888, par le marquis de Viaris . . .)* Paris: Publications du Journal *Le Génie Civil*, 1888. pp. 62. [Contains information concerning theories of ciphers, methods of deciphering, and in addition, a special method of breaking down the *chiffre carré*, one that is a variant of the methods used by Vigenère and Kerckhoffs. The study contains also a method of deciphering the Bazeries system. See also Lange et Soudart, *Traité de cryptographie*, IX, 78, 216; Locard, "Bibliographie cryptologique," p. 914.]

——— *L'art de chiffrer et déchiffrer les dépêches secrètes.* Paris: Gauthier-Villars et Fils, 1893. pp. 175. In-12°. (*Encyclopédie Scientifique des Aide-mémoire. Section de l'Ingénieur.*) [Contains processes of cipherment, methods and examples of deciphering, information concerning theories of ciphers, statistical data, and a bibliographical list of four items, p. 165. See also Lange et Soudart, *Traité de cryptographie*, IX, 78, 107, 122, 219; Locard, "Bibliographie cryptologique," p. 915.]

——— *Les dépêches secrètes et conventions internationales.* Paris, 1893. [See Lange et Soudart, *Traité de cryptographie*, XIV.]

——— *A B C Répertoire cryptographique chiffrant et déchiffrant*. Paris: Imprimerie Nationale, 1898. pp. 20. [See Lange et Soudart, *Traité de cryptographie*, XV.]

Viète, François. *Deschifrement d'une lettre escrite par le Commandeur Morco au roy d'Espagne, son maistre, du 28 octobre 1589*. Tours: Jamet-Mettayer, 1590. pp. 14. In-8°. [The principal decipherings of this famous French mathematician are preserved in manuscript form in the Bibliothèque Nationale, Paris (Département des Manuscrits: Les 500 de Colbert.). By some authorities Viète is reported to have written a *Traité des règles trouvées pour le déchiffrement des écritures secrètes*, but the existence of this work is quite problematical. Additional information concerning Viète and his work may be gained by consulting *Biographie Universelle*, Vol. 43, pp. 361-363; *Nouvelle Biographie Générale*, Vol. 45-46, pp. 135-137; Larousse: *Grand Dictionnaire Universel*, Vol. 15, p. 1030; Tallemant des Réaux, *Les historiettes* . . ., Paris: Techener, 1865, Ch. 53: "Viète." See also Carmona, *Tratado de criptografía*, p. 13; Baschet, *Les Archives de Venise*, p. 578; Dröscher, *Die Methoden der Geheimschriften*. . ., 24; Klüber, *Kryptographik*, p. 17; Lange et Soudart, *Traité de cryptographie*, XI, 31, 34; Locard, "Bibliographie cryptologique," p. 906; Wagner, "Studien," Vol. XII, pp. 28-29.]

Vigenère, Blaise de. *Traicté des chiffres, ov secretes manieres d'escrire; par Blaise de Vigenère, Bourbonnois*. A Paris: Chez Abel L'Angelier, M D LXXXVI. 343 f., 3 l. incl. pl., tables. In-4°. (Other editions: 1587; 1580 (mentioned by Gioppi); 1637 (mentioned by Lange et Soudart). Certain authorities such as Locard, Meister, Wagner *et al.*, indicate the Italian work: *Biagio di Vigenère, la criptografia racchiudente la maniera di scrivere secretamente*. Toulouse, 1644, as an Italian translation of the French author's treatise. However, according to Mendelsohn: "This book has no relation to Vigenère: it is a method of secret writing in the manner of Trithemius's *Polygraphia*." It is generally agreed by the majority of authorities that, with Porta and Trithemius, Vigenère is one of the founders of modern cryptography. Although the invention of the *chiffre carré* has been attributed to him by several authorities, modern research appears to indicate that he may have been merely the first to publish a description of it and its method, but that its invention was probably by Alberti and some of the early cryptographers employed in the Papal States. His treatise stresses the history of cryptography and processes of cipherment. It is to be noted also that leaves 331-335 contain the first European representation of the Japanese language and writing. For additional information concerning Vigenère and his works consult *Biographie Universelle*, Vol. 43, pp. 371-372 and *Nouvelle Biographie Générale*, Vol. 45-46, pp. 140-142. - Wallis, John. *Joannis Wallis, S.T.D., geometriae professoris Saviliani in celeberrima academia Oxoniensi, Opera mathematica et miscellanea. Oxoniae, 1693-1699. 3 vol. in-fol.* [It is known that Wallis early developed a deep interest in the deciphering of ciphers, and that his skill in this art eventually became so recognized that it won this noted mathematician the reputation of being the leading cryptographer of his age. The first recorded reference to his cryptographic skill occurred at the time of the capture of Chichester, in December 1642, when he succeeded in deciphering an intercepted letter in the course of a few hours. It seems that his interest in this art continued throughout his life, for on several occasions he interrupted his mathematical researches in order to accept a post as official decipherer. Vol. III, pp. 659-672 of his *Opera mathematica*, Oxford, 1699, contains examples of his deciphering. Furthermore, according to Klüber, *Kryptographik*, p. 17, Wallis gave examples of his deciphering in his treatise: *De combinationibus, alternationibus et partibus aliquotis*, which was published, first in English, and later in Latin. However, Wallis appears to have deliberately avoided explaining the methods he used in bringing about these decipherments, and it is said that he "steadily refused Leibnitz's requests for information as to his mode of deciphering." It is likewise of note that in 1737 John Davys published his *An essay on the art of decyphering. In which is inserted a discourse of Dr. Wallis. Now first publish'd from his original manuscript in the publick library at Oxford. London. The*

- X*** (Pseud.). *Dictionnaire de paléographie, de cryptographie, de dactylogie, d'hieroglyphie, de sténographie et de télégraphie, par M. X****. Paris: J. P. Migne, éditeur, 1854. [Published as Vol. 47 of *Nouvelle Encyclopédie Théologique, ou nouvelle série de dictionnaires sur toutes les parties de la science religieuse*, 52 vols., Paris, 1851-1855. In-4°. This volume has frequently been attributed to Comte Jacques Marie Joseph Louis de Mas-Latrie.]

Y

- Yardley, Herbert Osborne. *The American Black Chamber*. Indianapolis and London: The Bobbs-Merrill Co., 1931. pp. 375. (Reprinted, New York, 1933; London, 1934. Translations into at least French and Japanese have been published.) [The history and work of the Cryptographic Bureau, officially known as Section No. 8 of the Military Intelligence Division (M I-8). A romantically exaggerated, somewhat inaccurate, but very interesting book, containing information concerning methods and examples of deciphering, details of historical interest, codes, and statistical data. See also Lange et Soudart, *Traité de cryptographie*, XIV; Locard, "Bibliographie cryptologique," p. 921; Pratt, *Secret and urgent*, pp. 216, 249.]
- "La guerre des chiffres; la Chambre Noire Américaine; traduit par R. L. Claude. H. O. Yardley." [sic!] *Les Annales Politiques et Littéraires*, Paris, Vol. 103, pp. 184-189, 214-219, 242-248, 274-278, 304-310, 330-335, 358-363, Aug. 17-Sept. 28, 1934. [Translation of portions of *The American Black Chamber*.]
- . . . *Le cabinet noir américain (The American Black Chamber) avec quatre hors-texte. Traduit de l'anglais par E. Rinon . . .* Paris: Editions de la Nouvelle Revue Critique, 1935. pp. 249. (Bibliothèque d'histoire politique, militaire et navale.)
- "Secret inks." *Saturday Evening Post*, Philadelphia, April 4, 1931, Vol. 203, p. 3 *et seq.* [Discussion of secret inks and their utilization in espionage. Consists of pre-publication extracts from the author's *American Black Chamber*.]
- "Codes." *Saturday Evening Post*, Philadelphia, April 18, 1931, Vol. 203, p. 16 *et seq.* [Excellent explanation of codes; description of historic incidents in which codes played important rôles. Consists of pre-publication extracts from the author's *American Black Chamber*.]

- "Ciphers." *Saturday Evening Post*, Philadelphia, May 9, 1931, Vol. 203, p. 35 *et seq.* [Very fine explanation. Describes the decipherment of certain ciphers that were used by spies during the First World War. Consists of pre-publication extracts from the author's *American Black Chamber*.]
- "Cryptograms and their solution." *Saturday Evening Post*, Philadelphia, Nov. 21, 1931, Vol. 204, p. 21, 63-65. [Contains a summary of the history of cryptography, explanation of various systems, including that of Bacon, and many interesting illustrations.]
- "Are we giving away our state secrets? A cipher expert's view of the methods used by the Government in its diplomatic correspondence." *Liberty Magazine*, New York, Dec. 19, 1931, Vol. 8, pp. 8-13. [A bitter criticism of the Government for its alleged neglect of the importance and value of cryptographic developments.]
- *Yardleygrams. Elementary course in cryptography*. Indianapolis: The Bobbs-Merrill Co., 1932. pp. 190. (The London edition, (Hutchinson), 1932, pp. 190, bears the title: *Ciphergrams*.) [Contains 50 cipher problems with solutions, and represents various systems. It is an elementary work. See also Lange et Soudart, *Traité de cryptographie*, XIV.]
- *The Blond Countess*, New York, Toronto: Longmans, Green & Co., 1934. pp. 314. [The moving-picture "Rendez-vous" was based on this novel. It contains very interesting examples of how codes, invisible inks, etc. have been used by spies. Ch. VIII and IX cover the "ADFGVX" cipher.]
- *Red Sun of Nippon*. New York, Toronto: Longmans, Green & Co., 1934. pp. 247. [Interesting descriptions of the various methods of secret communication used by spies and agents in the international circles of the Orient.]
- "H-27, the blond woman from Antwerp." *Liberty Magazine*, Apr. 21, 1934, Vol. 11, No. 16, pp. 22-29.
